Chapter 2

GreenVulcano ESB Variables

–

Configuration

Chapter contents:

Document type

To be correclty handled by the configuration tool (VulCon and/or GVConsole), the **GreenVulcano ESB Variables** configuration file must have the following DOCTYPE:

- Root element: **GVVariables**
- System id: **http://www.greenvulcano.com/gvesb/dtds/GVVariables.dtd**
- Public id:

```
<!DOCTYPE GVVariables SYSTEM "http://www.greenvulcano.com/gvesb/
dtds/GVVariables.dtd">
```

Elements

The following paragraphs, one for Element, describes the elements and their attributes.

Description
`(#PCDATA)`

Each element of the configuration provides a field 'Description' optional that can contain free text available to the user.
This field can be used for notes and information that help users in configuration management.

This information can be used by the application GVConsole to enrich the reports relating to the configuration.

The description is always optional, but if used can not be empty.

#Icon: description.png

The element value can't be null.

The **Description** Element is used by: *GVVariables*, *variable*.

GVVariables

`(Description?, variable*)`

variable

`(Description?)`
